

ABSTRACT

The invention concerns an anti-panic bar comprising a fixed part (3) including a lock controlling element (5), and a support bar (4) mounted pivoting on said fixed part (3) about a longitudinal axis, between an inactive position wherein said support bar (4) takes up a position spaced apart from said fixed part (3) and an active position wherein said support bar (4) takes up a position closer to said fixed part (3) and wherein said support bar (4) activates said lock controlling element (5). The invention is characterized in that said support bar (4) is an extruded profile binged about said longitudinal axis through a pivot point (40).
